### Four macros to speed up miquest activities for EMIS LV.

You can create four macros in your Main Menu that will drastically improve your Miquest experience with EMIS LV.

If you don't have any macros defined on the main menu you can just download the macro set from our web site and import it.

If you have already got macros on the main menu, you can add four more macros on the end of your list by copying and pasting the information in the table below.

For consistency across practices we recommend keeping the same titles and descriptions.

The macros assume you are using the QUEST folder inside your SHARED folder.

Title	Description	Keys	Function
Delete Q	From Main Menu Delete all Queries	qpkdy{ENTER}{F1}	Loads QP screen, marks all queries, deletes them and returns to main menu.
Import Q	From Main Menu Import all Queries	qpql{ENTER}{RIGHT}shared\quest\{ENTER}{ENTER}k{ENTER}{F1}	Loads QP screen and imports all queries from the Quest folder, marks them all, and leaves the QP menu selected.
Run Q	From QP Run All Queries	ksak{ENTER}y{F1}	FROM THE QP MENU marks all queries, selects the scheduler, and sets all queries running now
Export Q	From QP export all reports	kbaeqp{ENTER}rx{ENTER}a{ENTER}C:\shared\quest\{ENTER}	FROM THE QP MENU, authorises all reports (assumes EQP is password), and outputs responses to Quest folder.

We recommend the following cycle of use.

1. Issue the Query Set from Quest Browser
2. From the Main LV Menu click Delete Q
3. From the Main LV Menu click Import Q (this leaves you in the QP screen)
4. From the QP screen click Run Q (wait for the queries to all say "Authorised: Ready to run" first)
5. From the QP screen, after the queries are finished processing, click Export Q
6. Import the responses into Quest Browser.
